Diego Martín

Monitoring and profiling

Monitoring: Observe the behaviour at runtime while software is running

- Dashboards
- Usually, after deployment

Profiling: Measure performance of a software while it is running

- Identify parts of a system that contribute to a performance problem
- Show where to concentrate the efforts
- Usually before deployment

Monitoring & profiling

Monitors an application while it is running

Records performance (CPU & memory usage)

JavaScript:

- Chrome (Timeline), Firefox Developer Edition (Performance tool)

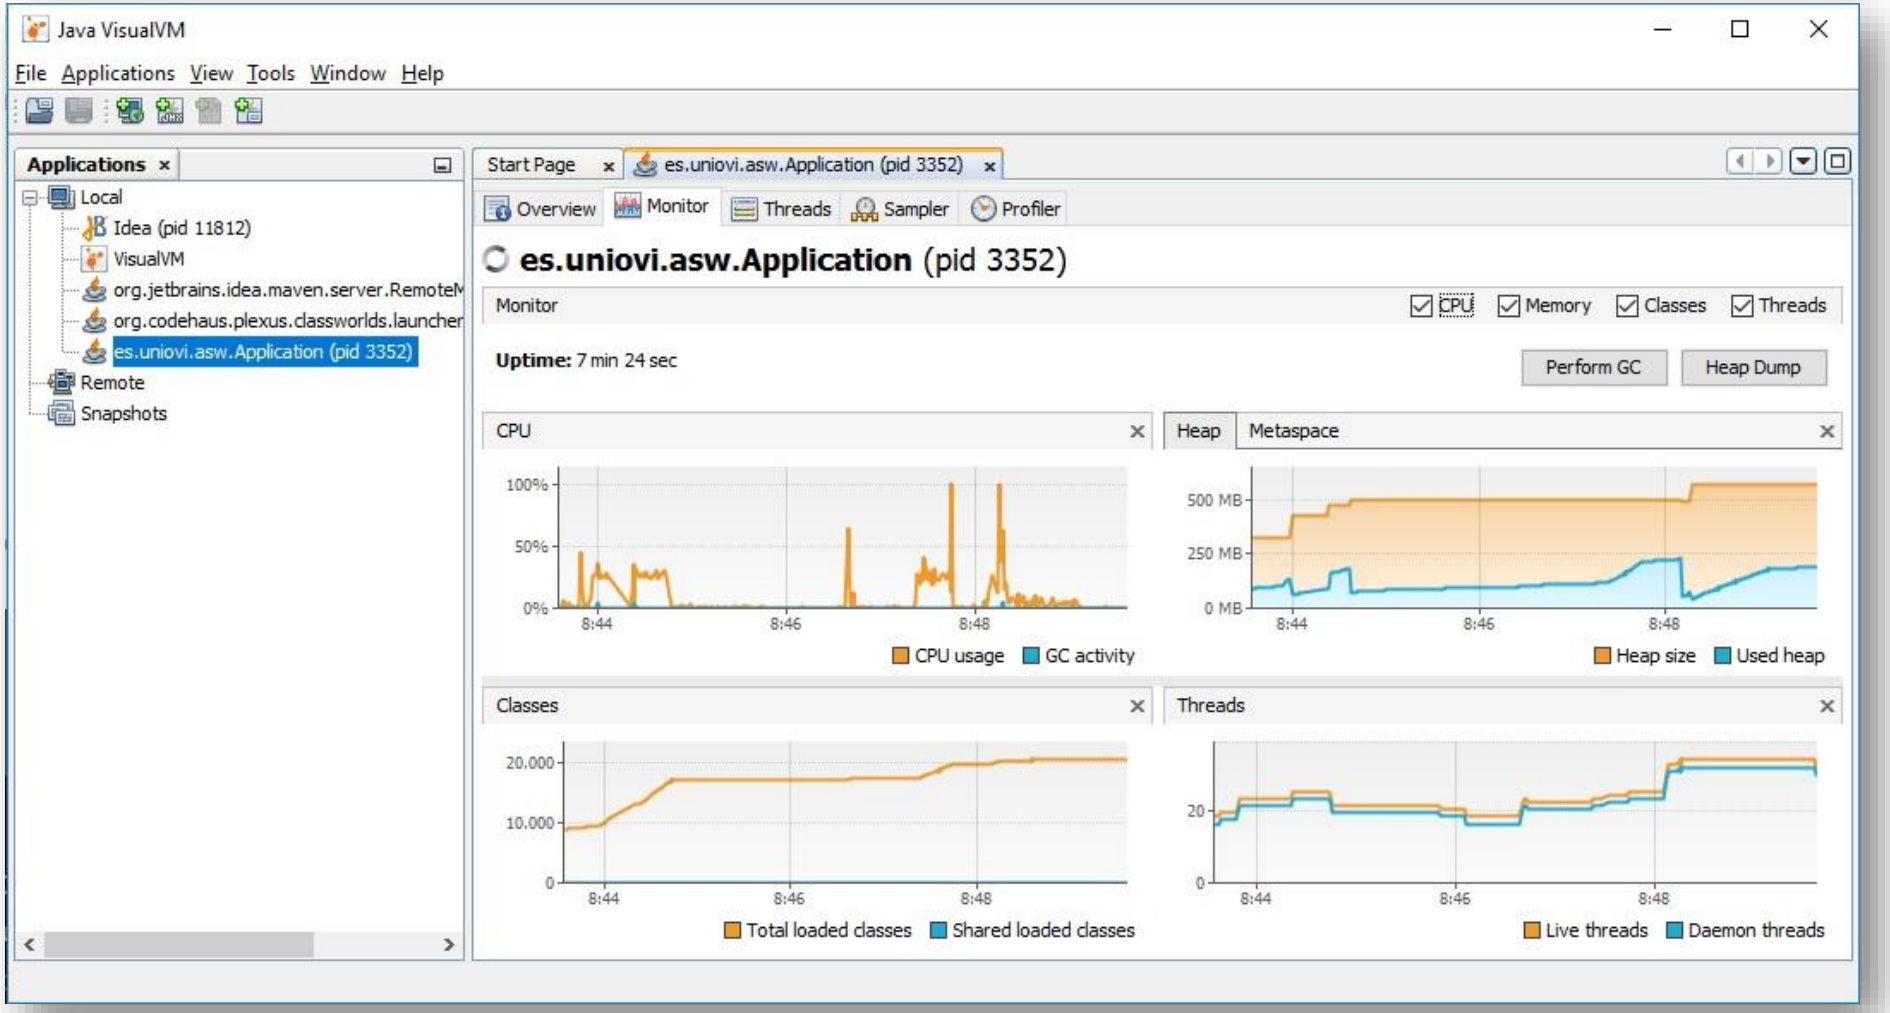
Server-side:

- JVisualVM, JProfiler, YourKit, JConsole
- Monitoring: Graphite, Datadog, Prometheus, Graphana

VisualVM

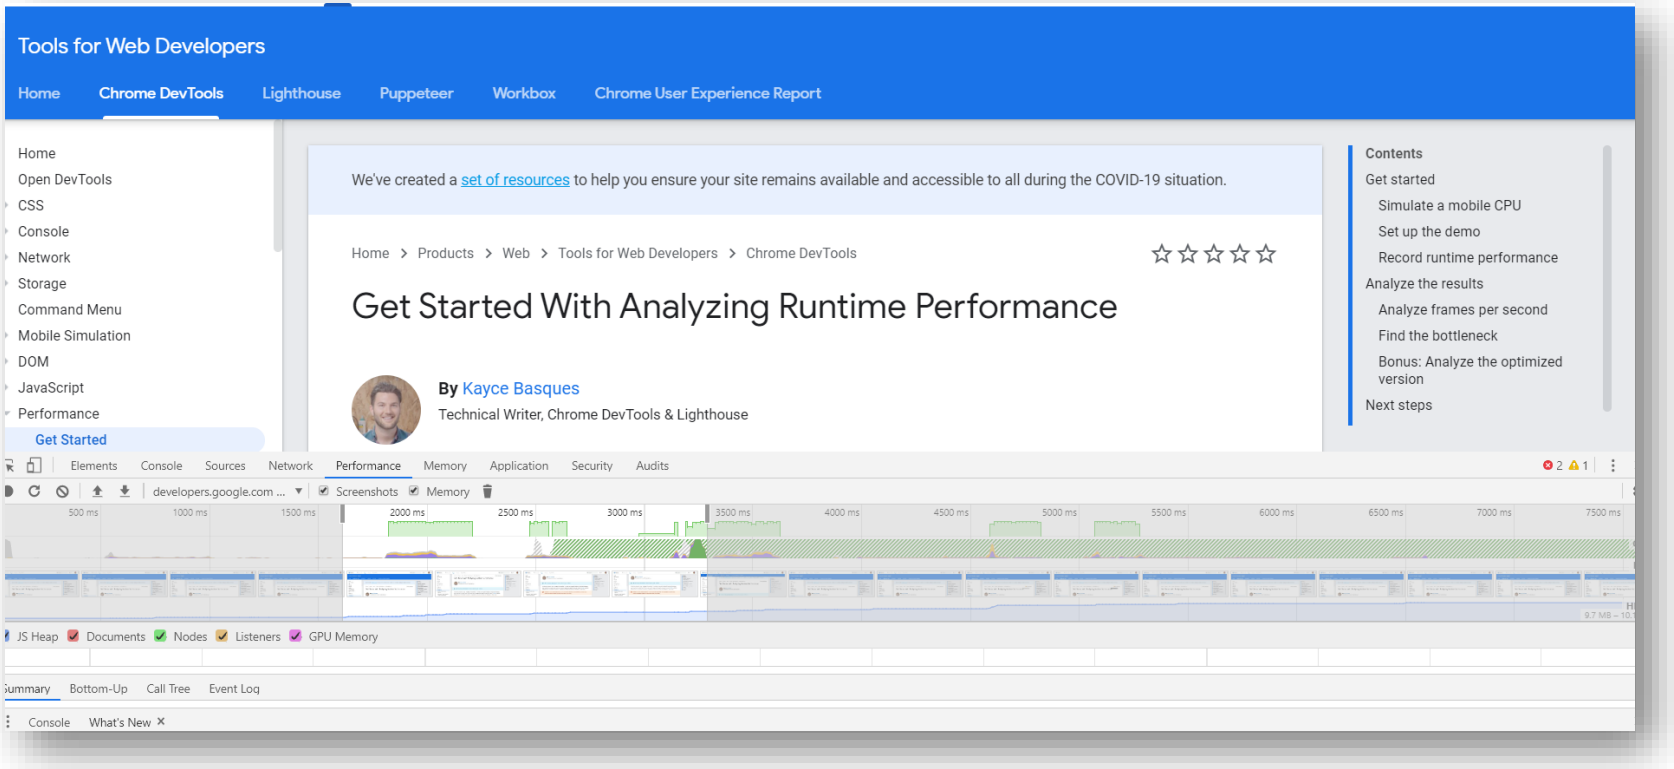
- https://visualvm.github.io/
- `jvisualvm`

Java/server JVisualVM



Browser: developer tools

Profiling/check performance



https://developers.google.com/web/tools/chrome-devtools/evaluate-performance

Example with Google Chrome

Incognito mode

At the top right, click the three dots and then New Incognito Window.

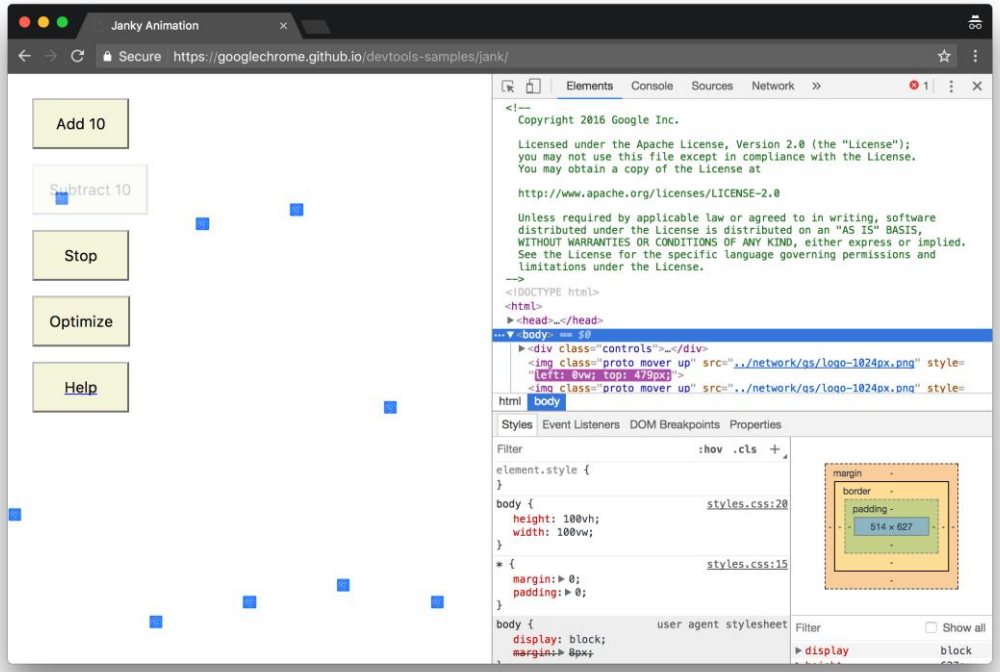
Windows, Linux, or Chrome OS: Press Ctrl + Shift + n.
Mac: Press ⌘ + Shift + n.

DevTools

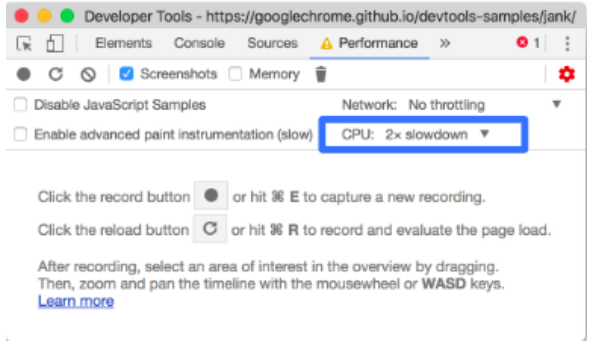
Windows, Linux: Control+Shift+I
Mac: Command+Option+I

Example with Google Chrome

https://googlechrome.github.io/devtools-samples/jank/



Performance>CPU>2 x Slowdown



Performance>Record

click Add 10 (20 times)

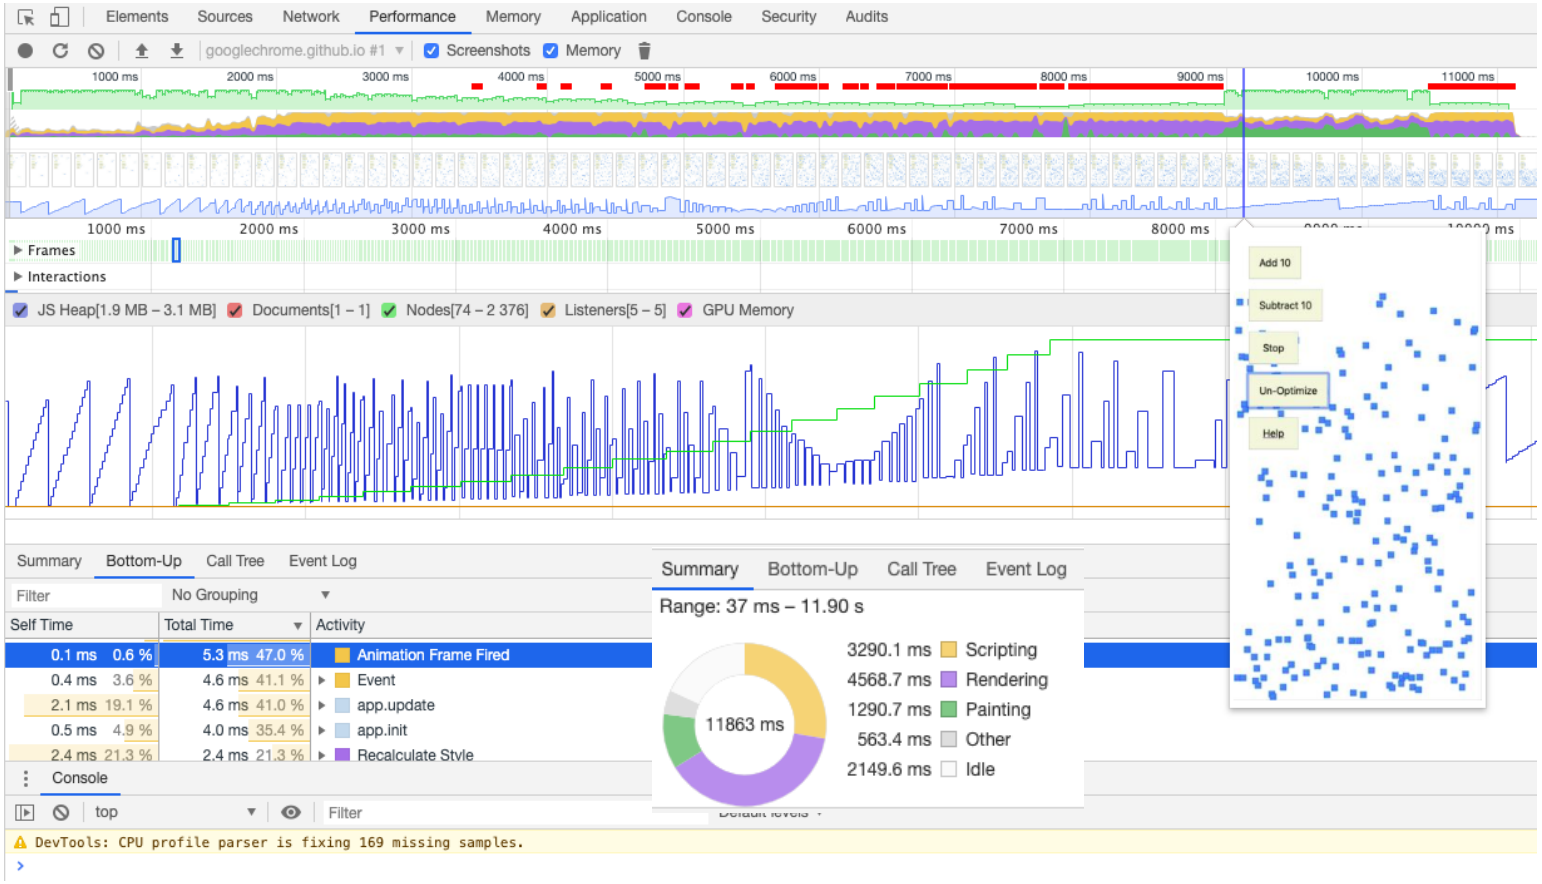
try Optimize / Un-optimize

Stop

Example with Google Chrome

Profile result:

Frames per Second ➡️
CPU ➡️



Bottleneck ➡️

Other tools for browser

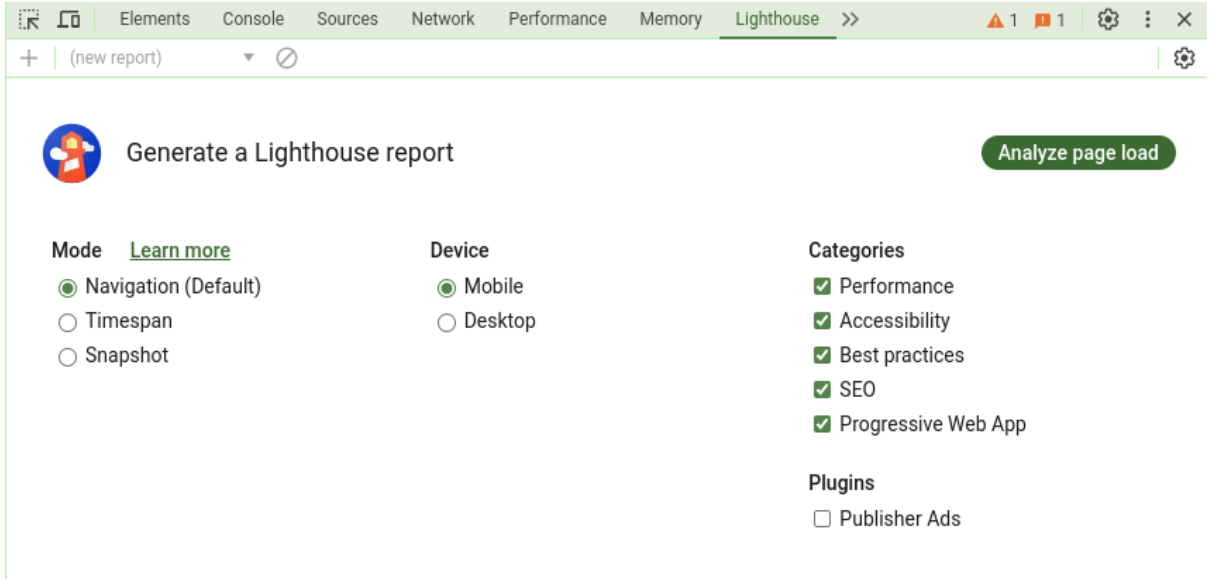
RAIL model:

Response, Animation, Idle, Load

https://developers.google.com/web/fundamentals/performance/rail

https://webpagetest.org/easy

Lighthouse (with Chrome)



Server side monitoring

Cloud platforms like Azure provide monitoring solutions

- Also available in Google Cloud, Amazon AWS, Alibaba Cloud…
- In the case of Azure: Azure Monitor

There is also the option to set up our own monitoring solution

Which software to use: *Prometheus* and *Graphana*

Guide:

https://github.com/Arquisoft/wichat_0/blob/master/gatewayservice/README.md

Server side monitoring

We need a library that can extract some metrics from our gatewayservice

npm install prom-client express-prom-bundle

```
const metricsMiddleware:RequestHandler = promBundle({includeMethod: true});
app.use(metricsMiddleware);
```

If we launch the gatewayservice, in */metrics* we will be able to see some raw data that would be used by Graphana to plot nice charts

We can choose which metrics to measure [doc]

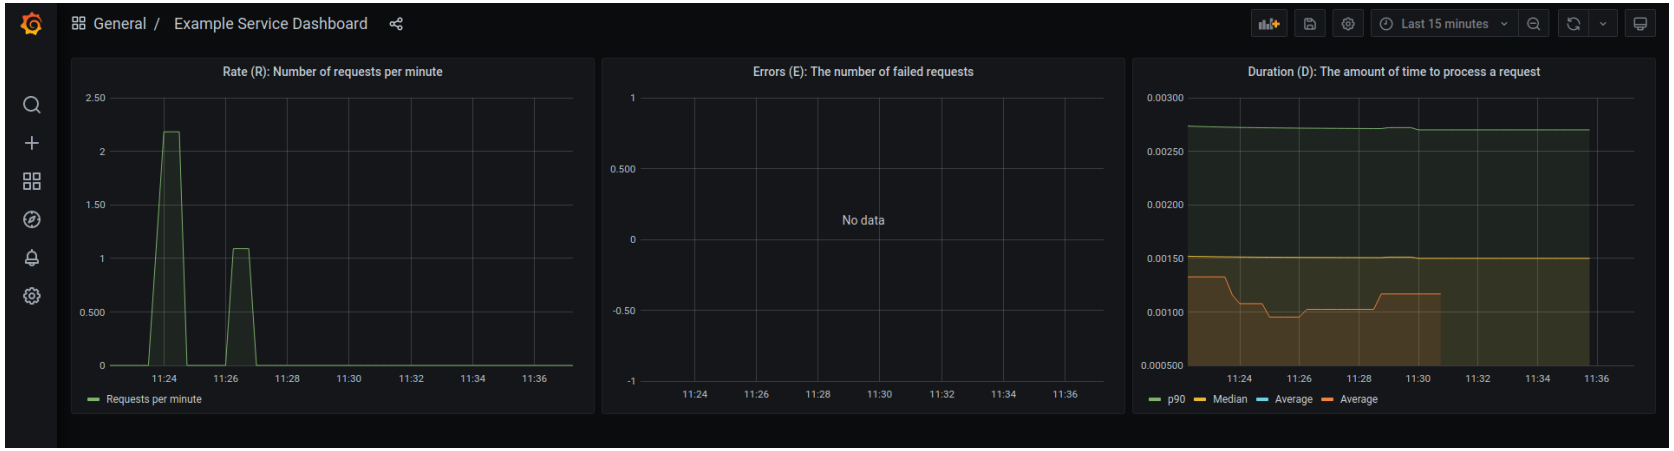
Server side monitoring

- Graphana cannot use this data directly, we need Prometheus
  - Prometheus will retrieve the data exposed by the service (e.g. gateway) and store it so it can be consumed by Graphana
  - We will work with a docker image [prom/prometheus] that can be configured through a single file

```
global:
  scrape_interval: 5s
scrape_configs:
  - job_name: "example-nodejs-app"
    static_configs:
      - targets: ["gatewayservice:8000"]
```

Server side monitoring

- How to configure Graphana
  - Graphana will use Prometheus as data source
  - We also have a docker image for running it [grafana/grafana]
  - We need to configure the datasource and the dashboard (which charts to plot)



Example of Real Grafana Dashboards

https://grafana.wikimedia.org/
